IEMHS

Jan 2021 - Dec 2021 (11 months)

Company: Freelancer(Part-Time) / virtual university

https://www.dropbox.com/sh/wzldvig10gmmmf0/AABT0b_14ElqgkEl6yzRLmTOa?dl=0

Tools: visual studio 2019, c#, MVC, entity framework, javaScript, SQL, css, javaScript, HTML

The Integrated Electronic Medical Healthcare System (IEMHS) is an advanced application designed to provide medical care facilities remotely. This platform offers a wide range of benefits for both patients and healthcare providers, including doctors, ambulances, and medical stores. Through IEMHS, patients can access medical services from the comfort of their homes, while healthcare providers can manage their services more efficiently.

The system is overseen by an admin who monitors all users on the IEMHS platform, ensuring smooth and secure operations.

Remote Network Authorization and Monitoring System

Jan 2019 - Dec 2019 (11 months)

Company: virtual university of pakistan / University

<https://www.dropbox.com/s/w3bje98vb006aoo/Code.rar?dl=0>

Tools: Visual Studio 2015, C#, .NET framework, SQL server-2012, WPF, EntityFrame Work, JavaScript, CSS, HTML

- Client-server application allows server to monitor and manage connected users (e.g., Wi-Fi users, cafeteria customers).
- Users can sign up by providing full name, phone number, Gmail, and password.
- Admin can grant or block user access through a dashboard.
- Granted users receive an ID from the server to log in and start their session.
- Server notifies users when the session is about to expire.
- Users can extend their session anytime during the active session.
- After session expiration, a session usage bill is shown to both the server and the client.
- If a user connects via a proxy, the system issues three warnings before blocking access.
- Admin has the option to change the dashboard theme.
